Fanny Verrax

Centre for the Study of the Sciences and the Humanities

Short description (Short CV) of the participant

PhD Candidate. His research field : philosophy and Sociology of Science, environmental Studies, political and Economic Theory.

Short description (Short CV) of the institution

The Centre for the Study of the Sciences and the Humanities (SVT) was established in 1987 as a permanent inter-faculty institution at the University of Bergen, Norway. Today the Centre has a staff of about twenty people, with research fellows, post-docs, and permanent academic and administrative personnel. In modern scientifically-based high risk societies there is a documented need for critical reflection and constructive collaboration across different fields. The Centre has, like other academic institutions at the University, its work tied to research, teaching and information dissemination. The Centre prioritizes collaboration with colleagues in other fields; in this sense the Centre also has an interdisciplinary profile.

From its inception the Centre has had the theory of science and ethics portion of the PhD training of doctoral candidates from different faculties as one of its most important tasks. In latter years the Centre has been responsible for similar training of researchers under the auspices of Vestnorsk Nettverk (VNN-FU), which is one of the collaborative programmes for universities and university-colleges in Western Norway, from Agder to More.
